GROUP

Important changings we are making to the production of our L1 and L2 machines.

As I am sure some of you are aware over the last few years the lead times for our 'L' series machines has significantly increased, at times, as long as 3-4 months.

These delays have primarily been caused by extended supplier lead-times, of our manufactured parts.

As a result of these continued issues, we have taken the decision to bring the manufacture and build of the L1 and L2 machines back to our factory in Ivybridge, Devon, to enable the following:

- Manage our supply chain in a more rigid and transparent manner
- Improve the ability to develop and improve the design and performance of the product through local and internal skill base
- Develop and maintain the highest standards of design, skills, expertise, and production processes
- Reduce costs within production and improve lead times, enabling our customers to benefit from a high quality, high precision product at a more competitive price

As I am sure you will appreciate, this change in manufacture and build will take time to implement fully and therefore initially, there will be some increased delays in machine availability for the L1 and L2 models.

However, we hope you feel this is a positive change and will continue to support Meddings Machine tools.
